

Managed Endpoint Detection & Response

Deny Attackers A Foothold On Your Network

Even the best endpoint prevention tools and strategies can't stop all endpoint compromises. Endpoints are easy targets. CISOs know that attackers exploit software, human error, and other endpoint vulnerabilities to enter critical systems and steal business-critical data. Successful endpoint defense requires detecting and isolating compromised endpoints before attackers can exfiltrate your data.

Masergy Managed Endpoint Detection & Response quickly finds hacked endpoints on your network and responds 24/7 through expert security analysts on your behalf to deny attackers a foothold via endpoints and mitigate the incident before real damages occur.

MASERGY MANAGED ENDPOINT DETECTION & RESPONSE SERVICE DELIVERY

Continuous Endpoint Integrity Monitoring

Masergy Managed Endpoint Detection & Response is a turnkey service that delivers continuous monitoring and response to minimize your risk from advanced threats. We have integrated leading endpoint detection & response (EDR) agent technology from Carbon Black Response with Masergy's patented network behavioral analytics to monitor rigorously for malicious activity targeting your information assets. The combination of Masergy machine learning-enabled network analytics and EDR technology finds suspicious endpoint activity more accurately and quickly than competing services.

Trusted and Cost-effective 24/7 Managed Security

By automatically aggregating network alerts with suspicious endpoint activity, Masergy's security analysts have rich, highly-actionable data to respond quickly to threats for you 24/7. Masergy has Security Operations Centers on three continents staffed by industry-certified security analysts who integrate readily with your internal security team to monitor your network endpoints for you. And every subscriber to our Managed Endpoint Detection & Response service is allocated expert threat hunting resources as part of an aggressive defensive posture for countering sophisticated attackers.

FEATURES

- Continuous 24/7 endpoint alert monitoring
- Turnkey managed information security service
- Patented machine learning technology
- Aggressive threat hunting defense included
- High-touch expert incident response and remediation

BENEFITS

- Delivers 24/7 endpoint monitoring on a global scale
- Reduces risk of endpoint compromise
- Provides better data for faster threat remediation
- Integrates with existing investments in endpoint controls
- Relieves stress on internal IT resources
